GREEN PICK

BYE-BYE, BRITTLE NAILS

The next generation in healthy nail care.
BY WENDY LEE HYNES

Evo, developed by Bio SculptureGel, unveils a professional gel nail line with more than 40 fabulous colours, a base and two top coats: glossy and matte, depending on your preference. The secret to why Evo is healthy for your nails lies in its oxygenating base infused with vitamins A and E—two vitamins that maintain nail health and prevent them from becoming thin and brittle due to gel manicures. The easy-on, easy-off formula strengthens the nail while allowing air to permeate into it, which enables an exchange of oxygen and water vapour

between our natural nail and its environment. Each layer of Evo only takes about 30 seconds to cure with an LED lamp. Plus, Evo is 5-free, so you won't find any of the five harmful ingredients that are typically found in other nail brands: dibutyl phthalate, toluene, formaldehyde, formaldehyde resin and camphor. Evo is also vegan and isn't tested on our furry little friends. In just 30 minutes, your nail technician will give you a chip-free mani lasting up to three weeks long—one that you'll feel good about long after leaving the salon.

FOR THE LOVE OF THE EARTH

The Body Shop now creates product packaging with recycled air pollution.

By 2020, The Body Shop promises to reduce the use of oil-based packaging by 70 per cent. The brand's first step toward fulfilling this commitment: a partnership with California-based Newlight Technologies, which produces a thermoplastic material that behaves like plastic (but uses environmentally friendly AirCarbon instead of a toxic oil base) for the packaging of the brand's iconic body butters.

editor's pick

For summer I love The Body Shop Pinita Colada Body Butter (\$21, The Body Shop), a refreshing scent reminiscent of the tropics.

AirCarbon repurposes methane and carbon dioxide, two greenhouse gases, that would otherwise be released into the atmosphere as air pollution rather than oil.
